COUNTRY USSR -2- REPORT TOPIC Riga-Spilve Airfield EVALUATION PLACE OBTAINED DATE OF CONTENT DATE OBTAINED DATE PREPARED 15 November 1954 REFERENCES PAGES 1 ENCLOSURES (No. & TYPE) REMARKS This is UNEVALUATED Information 1. Between 9 and 13 October 1954, more than 30 single-jet aircraft were observed at Riga-Spilve (5659 N/2409 E) airfield, Latvian SSR. The aircraft apparently were MiG-15s since their wings and elevator assemblies were swept back and the rudder assembly projected far beyond the tail. During the entire period of observation there was air activity by these aircraft. Activity began at 0800 and terminated at 1600. The aircraft continuably took off and landed, and several planes were simultaneously aloft circling several times over the field. It was only once observed that 3 aircraft assembled in the air and circled several times in a flight. The 3 planes landed	25X1

at the same time. 1	25X1
2. On 12 October. landings were made by 3 twin-engine propeller-driven aircraft At least 5 windows were observed in the fuselage. The aircraft had singuider assembly and swept-back leading edge of wings. The pilots seats and engines projected beyond the leading edges of wings. The wings aircraft were still parked at the field on 13 October. Twin-jet airc were not seen.	3
3. A wide cement lane ran along that side of the field nearest to the rithing lane was not used as a runway but by motor cars and tank trucks; aircraft were also seen moving on it.	/25X1
